

Oilfield Chemical Treatment Program

1. Antifoams-Defoamers

We have a complete defoamer-antifoam product line that includes:

1. Silicone emulsion (including food grade)
2. biodegradable (esters and fatty alcohols)
3. down hole (mineral oil, ethoxylated nonylphenol, etc.)
4. organic (polyglycols, etc.).

Our silicone antifoams are used extensively for drilling muds, cements to prevent air entrainment, asphalt processing and transportation, lubricating oils, various extraction processes, distillation processes, gas/oil separation, gas processing, delayed coking, etc.

2. Petroleum Additives

For additive treatment, we offer:

1. Gasoline antioxidants
2. Fuel Corrosion Inhibitors
3. Fuel Dehazers
4. Heavy oil pour depressants
5. Cold flow improvers
6. Distillate stabilizers.

3. Coagulants-Flocculants

We have a complete line of coagulants and flocculants for separation, clarification, etc.

4. Cement & Silica Flower

1. Cement type H
2. Silica flower at different mesh sizes (100, 200, etc.).

5. Biocides/Corrosion Inhibitors

We offer an extensive line of biocides and corrosion inhibitors.
