

## ***W-Rem<sup>SM</sup>*** **WATER REMOVAL PROGRAM**

The new W-Rem<sup>SM</sup> Program is a customer-focused, value-added specialty chemical program designed to enhance profits in polymer and elastomer plants.

W-Rem<sup>SM</sup> can help increase polymer production by reducing the surface tension of the polymer. This results in the reduction of the water content of the polymer prior to oven drying.

The implementation of W-Rem<sup>SM</sup> provides our customers the following financial and process benefits:

1. Reduces energy costs
2. Eliminates bottlenecks in the dryers
3. Allows increased throughput in the dryers
4. Improves product recovery in the centrifuge
5. Increases the ability to recycle centrifuge effluent water.

All of these benefits translate into increased profits for our customer's business investment.
